IMPROVED CABINET FAN & FILTER MOUNT

Rock-Ola has added a Fan Mount Assembly (P/N 61465-A) to each cabinet fan. The mounting bracket has a clip that secures the fan and filter units and also allows them to be easily removed for cleaning or replacement. Previously, cleaning or replacement of fan or fan filter required tools.

The new fan mount and clip assembly will be used in all E-Rock-PV, Wall-Rock-PV, and Rock-Star, and E-Bubbler models henceforth. A fan and filter retro-fit kit, Part No. 02464, is now available for those machines built with the original configuration.

The specially designed hinged clip holds the fan and filter in place and releases easily for cleaning and replacement.
